

ABSTRACT

Paint roller grid includes a pair of hooks each including a rearwardly extending upper portion and a downwardly extending intumed lip having a forwardly facing inwardly angled surface for engaging an outer cylindrical surface of a container below the container rim when the hooks are hooked over the container rim and the grid is inserted into the top opening of the container. The hooks may be spaced from a bottom edge of the grid a distance slightly greater than the height of the container, whereby when the grid is inserted into the container opening and the hooks are hooked over the container rim, the bottom edge of the grid will engage the inside bottom surface of the container. A pair of feet may extend rearwardly from the grid for engagement with the inner cylindrical surface of the container to prevent the grid from moving within the container during rolling of a roller cover on the grid wiping surface.
